

Instruction for program Power Systems and Communication Technology (MPA-EAK)

Applicants to the study program Power Systems and Communication Technology shall pass the entrance examination in one of the selected field: Electrical Power Engineering or Communication Technology and Networking. Please see the topics for other study programs (Electrical Power Engineering or Communications and Networking), which are relevant also for the study program Power Systems and Communication Technology. You can choose only one field for your entrance exam.

Details about the selection of the field of the entrance exam will be specified in the invitation letter sent to applicants one month prior to the exam.

Evaluation of the entrance exam

The written knowledge test shall comprise several problems/tasks selected from the defined topics. The test shall last 60 minutes, and the maximum overall score available is 70 points. The oral part of the exam has a form of professional discussion with the candidate about selected topics with the maximum overall score of 30 points, lasting up to 20 minutes. The oral part is conditional upon the result of the written test. The entire entrance exam is done online. Candidates are expected to have a good level of English.

The reviewing and correction of any and all entrance tests submitted for assessment shall begin immediately after the examination has ended, and the responsibility for the entire procedure and/or its outcomes shall be with the academic staff member(s) involved. The results will appear in the participants' e-application tables.
